IT SOLUTIONS FOR SUCCESSFUL SMES

IS.

Every business needs the right digital solutions to run efficiently. But if technology is not your core business, it shouldn't be your main focus.

Business Basics from Internet Solutions gives you access to high-quality technology services in one package, delivered and supported by one, reliable partner.

The standard package comes with Internet access (with guaranteed availability) and secure cloud backup. You can build on that by adding virtual machines, cybersecurity, and our Smart Hands configuration service – whatever your business needs.

ONE TECHNOLOGY BUNDLE, MANY BUSINESS BENEFITS

Focus on your business and leave the technology to us

BUILD YOUR OWN TECHNOLOGY SOLUTIONS PACKAGE

Choose the services you need, now and tomorrow

DESIGNED FOR YOUR BUSINESS AND YOUR BUDGET

Trust your technology to a reliable partner

ONE TECHNOLOGY BUNDLE, MANY BUSINESS BENEFITS

Focus on your business and leave the technology to us

Choose the services you need

Why shop around for a range of technology solutions when you can build the package you need with just one service provider?

Internet Access and Cloud Backup come standard with every Business Basics bundle, giving you the fundamental tools you need to get connected and keep your business information safe.You also get FREE 2U co-location space and 1MB of Internet breakout at our data centre at Ligali Ayorinde, Victoria Island.

Stay connected with Internet Access

As more and more applications move online, reliable connectivity is a must-have. The IS Internet Access service is therefore a standard feature of every Business Basics package.

Internet Access provides the same performance and quality of connectivity that network telecom service providers use. It can accommodate bandwidth-intensive applications and communication tools, so you won't have to worry about video or voice calls breaking up, or losing valuable productivity hours because of slow bandwidth.

Downtime is no longer an issue, either. Thanks to our subscription to multiple submarine cable systems, we can guarantee up to 99.9% availability on our Internet backbone.

You can choose bandwidth of either 2 MB or 4 MB, based on the demands of your applications and needs of your users.

Back up and restore data with IS Cloud Backup

You may be surprised by how much data even small businesses generate every day. It's so important to back up the information that lives in emails, documents and other files, as you never know when you'll need it.

It's also vital to be able to recover days or even months of work in the event of a disaster. Business Basics supports your data storage and business continuity with IS Cloud Backup, which allows you to run backups automatically and restore critical information quickly, so business can continue as normal.

IS Cloud Backup has a number of tools for improving the backup process. These help you to free up disk space, decrease bandwidth use, and run faster, more efficient backups

Other services you can add

You can add any of these extra services to the bundle, at any time, as your business grows. These services are designed to suit the needs – and budgets – of small and medium-sized business:

- **Security**: Protect your network with our firewall solutions
- **Virtual Machines**: Use our infrastructure to host your servers as virtual machines
- **Smart Hands**: Our engineers will help you configure your device to IS WAN, either remotely or on site (currently

BUSINESS BENEFITS

BUILD YOUR OWN TECHNOLOGY SOLUTIONS PACKAGE

Choose the services you need, now and tomorrow

Standard bundle and optional services

Business Basics is structured to give you two critical business IT solutions – Internet access and data backup – with the option of adding additional services as you need to:

	Services	What you get!
Standard Bundle	Internet Access	2 MB or 4 MB Bandwidth
	Cloud Back up	2 GB or 5 GB Storage
Optional ad-ons	Security	Outsourced Firewall or FortiWiFi
	Virtual Machine	
	Smart Hands (Lagos only)	

Standard bundle

Internet Access

- Connect to the Internet using the IS network
- 99.9% availability, guaranteed on backbone
- Choice of connectivity speed: 2MB or 4MB

Cloud Backup

- Choose 2GB or 5GB of cloud storage
- Back up to a remote server, inside your local area network, or to a mirror service hosted by IS
- Schedule backups to run automatically
- Store data securely, in the cloud
- Restore quickly to any previously backed-up state
- Choose the WebAccess option to allow remote users to log on and access files from anywhere

Optional services

Managed Security

Get secure, stable releases of security operating systems to protect systems and files. With IS Managed Security, you can choose either our Outsourced Firewall or FortiWiFi solution to protect your network against threats like data breaches and theft, financial lost, reputational damage and even criminal liability.

PRODUCT OVERVIEW

DESIGNED FOR YOUR BUSINESS AND YOUR BUDGET

Trust your technology to a reliable partner

Simplify your technology operations by dealing with just one technology partner for connectivity, business continuity, security and hosting.

Internet Solutions has partnered with businesses in Africa for over 20 years, and all our services are configured and managed by industry experts. We have the experience to help you choose technology solutions that will support your business, and the skills to make sure our services deliver the performance you expect.

Because the solution is designed to be tailored to your business requirements, you don't have to sign up – or pay for – services you don't need. You can opt for the standard bundle, the entire suite of services, or anything in between.

You can also adjust your contract if you need to add or upgrade services as your business grows.
